

Joseph DiMartino

Write down a minimum of two things that you liked or found interesting about what other groups are doing ... Perhaps an approach that seems promising that you hadn't considered. Focus on positive things that other groups are doing well.

- Adam talked about using spring boot for their backend since that's java based, which I haven't heard of, but it seemed interesting
- Ryan is adding a view count feature to the articles which would make it easy to track the most popular publications that were posted, also Ryan is using all of the metadata from PDFs, so he didn't have to write extra code

Write down a minimum of two things that you will consider improving/changing based on discussion and feedback from the other groups. (I am not asking you to definitely change anything in your project, but I am asking you to be open to feedback and to discuss this feedback with your teammates after this activity)

- I will consider a better way to display the PDFs. As someone who's working on the front-end, I was mostly concerned about the design of other web pages, but the main purpose of this web application is for the graduate students to post their work and get it reviewed, this needs to be the bulk of the project. All of my textbooks are PDFs so I will test this since they are also large files.
- I discussed about the "domino pizza tracker" where each uploaded publication will have a status feature, which we can "easily" make into a pizza tracker and show the status of the publication.
- We talked amongst ourselves and decided our original design of our homepage needs to change and include uploaded images that will rotate.
